## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the projections in claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

2. The amendment filed 3/3/09 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the spaced projections for breaking up the seasoning disposed along the drive shaft as shown on page 3 line 11-14. Applicant is required to cancel the new matter in the reply to this Office Action.

3. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: proper antecedent basis should be provided in the specification for the teaching that the projections of the screw are positioned at spaced locations along the screw, as recited in claim 20. No new matter should be entered into the application

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1, 11 and 20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention, i.e., New Matter.

The specification as originally filed does not provide support for the teaching of “a plurality of notches including projections for breaking up the seasoning” as now recited in claim 1. Additionally, the specification as originally filed does not provide support for the teaching of “wherein the notches of the screw cause the seasoning to fall into the grinder.” as now recited in claim 11 and “the projections of the screw are positioned at spaced locations along the screw” as now recited in claim 20.

### ***Response to Arguments***

6. Applicant's arguments filed 3/3/09 have been fully considered but they are not persuasive.

Applicant's argument with respect to the rejection under U.S.C 112 second paragraph have been considered but are moot since rejections no longer relied on.

In response to applicant's argument on page 6 that the person skilled in the art would readily understand from this that “movement of the screw 7 with its notches 8 breaks up the salt, facilitating grinding as the salt falls into the *grinding* device...” It is submitted that the notches of the screw cause the seasoning to fall into the grinder”, and reconsideration and withdrawal of the rejection of claim 11 under 35 U.S.C. §112, first paragraph, is respectfully requested, the examiner would like to point out that while the notches may breaks up the salt they do not appear to cause the seasoning to fall. For example if one hold the device horizontally, the notches may still breaks up the salt but since there is no force of gravity involve, they do not cause the slat to fall anywhere.

Applicant's argument with respect to the DE 29 22 656 has been considered but is moot since rejection no longer relied on.
